ULTRA LIGHT WEIGHT CHROME MOLYBDENUM FLYWHEEL

Over 27 years experience in producing high technically advanced flywheels of the highest quality. A fact that no other company can claim.

Ultra Light Weight Chrome Molly Steel Flywheels

TODA original design, race proven

With developing flywheels for TODA Race programs, we have come to understand the most desirable characteristics required for the ultimate flywheel.

Along with our racing experience we now use CAD solid modeling workstations, to further reduce stress and to improve weight distribution and inertia.

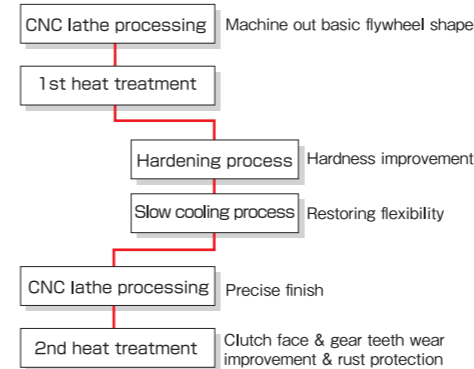

Example: Toyota 4AG flywheel; TODA's chrome molly flywheel vs. standard flywheel.

48% of the weight and 42% of inertia.

(STD/weight 7.7kg → 3.7kg Inertia 0.79kg·cm·S² → 0.33kg·cm·S²)

Precision and durability, a product of high precision CNC machining and a 2 part heat treatment.

The production of a TODA chrome molly flywheel can be broken down into several sections. 1st the basic flywheel shape is machined out. Then the 1st of two heat treatment processes is carried out, which hardens the chrome molly it is then slowly cooled down to restoring some flexibility. After which the final detailed machining is done. With finally the 2nd and final heat treatment giving the clutch face and the gear teeth a greater wear durability rate and rust prevention.

Toda racing chrome molly steel flywheel & a standard flywheel both analytic figures.

Precise processing by machining center

Removal of weight from the outer edge of the flywheel is the best way to reduce the inertia. All machining is done on a CNC Machining Center, to achieve the highest levels of accuracy and balance found in TODAs chrome molly flywheel.

Accurate processing by CNC lathe

A CNC lathe which gives us the high level of detail is indispensable. TODA racing manufactured flywheels come without sharp edges and acute angles. Curves are used to blend all sections together so reducing the stress found in the flywheel enabling it to work safely in the extreme environment that it has to work in.

WELL BALANCED TODA RACING Chrome Molly Steel Flywheel + High Power Clutch KIT

Super response. Improved circuit lap times by shortening braking distances.

TODAs Three part kit, flywheel + strengthened clutch cover + strengthened clutch disc.

Set balanced by dynamic balancer.

The clutch disc, choose from either a sports disc (non asbestos) or a metallic disc.

TODA RACING-Dynamic balancer

Sports Disc Clutch KIT WELL BALANCED

Metallic Disc Clutch KIT WELL BALANCED

Special set price is set for each model as TODA Flywheel + Clutch cover & Disc + Well-balanced

4AG LEVIN·TRUENO/MR2

4AG Ultra Light Weight Chrome-molly Flywheel & Clutch KIT for AE86/AE92/AW11

TODA HIGH POWER SINGLE CLUTCH KIT

Improvement in clutch response

A strap drive system connecting the pressure plate to the cover is used, improving both the response of the clutch pedal operation as well preventing noise commonly found when the clutch is depressed.

A low inertia disc

A high friction valve, low wear rate, and a metal material with high heat resistance made into a compact size (φ200mm). Gives you a high power transfer capacity and a long life. A small damper disc specially designed, and optimization of the metal pad including its thickness. Greatly reducing inertia to below that of the original product. Giving enhanced shift feeling and reduced synchro ring wear with in the gearbox.

High quality. Chromium molybdenum flywheel

Stress analysis, balance, and inertia are simulated using CAD solid models for optimized performance. An overall design, designed to give good weight savings and low rotation characteristics.
